

# RED WOLF FACT SHEET

## What Is A Red Wolf?

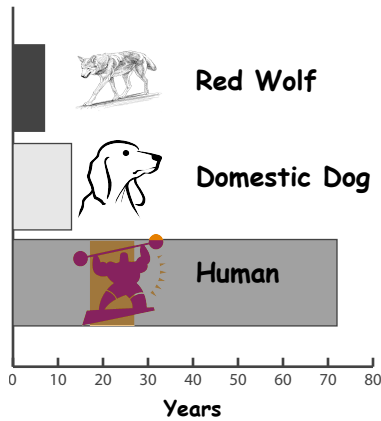

Red Wolves are one of two kinds of wolves in North America, and are related to domestic dogs. They have long ears, long slim legs and have mostly brown, black and reddish fur.

### HOW BIG ARE RED WOLVES?

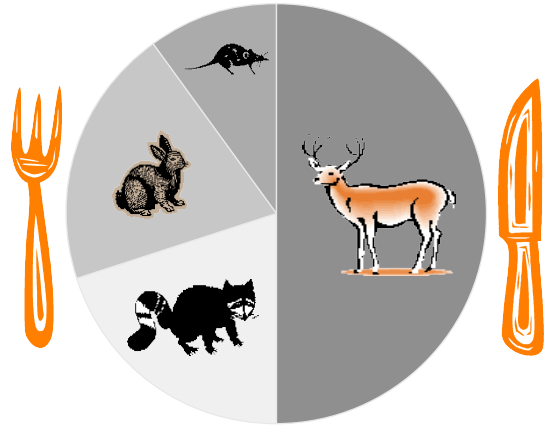

Red Wolves are smaller than gray wolves, but larger than coyotes.

### HOW LONG DO RED WOLVES LIVE?

Red Wolves have an average lifespan of 6-8 years in the wild.

### WHAT DO RED WOLVES EAT?

Red Wolves are carnivores (meat-eaters).

### WHERE DO RED WOLVES LIVE?

Red Wolves live in only 2 places in the wild. They also live at 38 zoos around the country.

### WHY ARE THERE RED WOLVES IN CAPTIVITY?

There are not many Red Wolves left in the world. Zoos are a leader in helping save these amazing animals. Stop by our Red Wolf exhibit for more details.
